RECLOSABLE ADHESIVE FOR FOOD APPLICATION

In designing flexible packages for food products, a reclosable label is often the best choice for keeping food fresh, advancing sustainability, and creating beautifully branded packages. Our range of materials for food package reclosures, combined with insights and recommendations from our technical experts, can help you choose the best reclosure for your package.

Typical build-up of a reclosable film structure with MAIC®Seal EX series

KEY FEATURES

- Reclose functionality in multi-layer film structures.
- Excellent reclose properties up to 10 openings.
- Suitable for extrusion coating and co-extrusion.
- Easy processing.
- Suitable for blown film and cast film technology.
- Food contact approved.

APPLICATIONS

- The MAIC®Seal EX series is a range of easy-to-handle and easy-to-process hot-melt adhesives for reclose functionality in multi-layer film structures. Ideally used in blown-film technology, the products can be combined with both PE and PP, as well as PET

ADHESIVE GRADE AND TECHNICAL INFORMATION

Technical Information available on request

*Development Grades

Please note: all adhesives should be tested thoroughly under end-user conditions to ensure label performance expectations are satisfied in the specific application.
